

DAMAGE DEFENSE

FOR TUB AND HORIZONTAL GRINDERS

PROTECT YOUR INVESTMENT. Reduces the likelihood of major machine damage caused by certain metal contaminants entering the hammermill.

CONVENIENT CONTROL. Damage Defense system is integrated into the grinder's control system to maximize effectiveness - no tools are required to reset the machine.

JOBSITE SPECIFIC. Sensitivity settings can be adjusted for specific jobsite conditions to help reduce nuisance shutdowns.

VERMEER EXCLUSIVE. Damage Defense system uses exclusive technology to sense metal vibration in the infeed to help prevent major machine damage.

RESPONSIVE MACHINE. When a contaminant is detected, Damage Defense system idles the engine down, reverses the infeed or tub, and disengages the clutch.

ROBUST DESIGN. The system is built and supported by Vermeer Advanced Control Systems with robust components and a weather resistant box.

HOW IT WORKS:

Vermeer Damage Defense system is ideal for any type of tub or horizontal grinder operation that may encounter certain metal contaminants mixed in with their incoming materials. If the mill comes in contact with metal while grinding, Damage Defense system will alert the grinder control and automatically initiate the shutdown process. The system will reduce the likelihood of metal being pulled into the mill by reversing the feed system immediately, helping prevent significant damage to the grinder.
